

We claim:

1. The use of containers comprising transparent polypropylene for packaging or storing articles from the area of clothing, sports articles, toys or home worker articles, with the containers having wall thicknesses of at least 0.8 mm, wherein the transparent polypropylene is a propylene homopolymer or propylene copolymer which has a haze value of $\leq 40\%$, based on a thickness of polypropylene of 1 mm and measured on injection-molded test specimens, and has a tensile modulus of ≥ 700 MPa and a Charpy notched impact strength at 0°C of ≥ 3 kJ/m².
2. The use of containers as claimed in claim 1, wherein the containers are used for packaging or storing shoes.
3. The use of containers as claimed in claim 1 or 2, wherein the containers are in two parts and consist of a box-shaped receptacle and a lid, where the receptacle and the lid can be joined to one another.
4. The use of containers as claimed in any of claims 1 to 3, wherein the box-shaped receptacle and the lid are configured so that in the closed state of the containers the receptacle and the lid lock into place.
5. The use of containers as claimed in any of claims 1 to 4, wherein the receptacles are configured so that they can be stacked inside one another in the empty state.
6. The use of containers as claimed in any of claims 1 to 5, wherein the containers are produced by injection molding.
7. A container comprising transparent polypropylene, with the containers having wall thicknesses of at least 0.8 mm, wherein the transparent polypropylene is a propylene homopolymer or propylene copolymer which has a haze value of $\leq 40\%$, based on a thickness of the polypropylene of 1 mm and measured on injection-molded test specimens, and has a tensile modulus of ≥ 700 MPa and a Charpy notched impact strength at 0°C of ≥ 3 kJ/m² and the containers are provided at the bottom with a material which has a coefficient of sliding friction which is greater than that of the transparent polypropylene.
8. The use of containers as claimed in any of claims 1 to 6, wherein the containers are containers as claimed in claim 7.

9. A system for packaging or storing articles from the area of clothing, sports articles, toys or home worker articles, with at least two objects being present in a package, wherein the objects are surrounded by a container comprising a transparent polymer and having a wall thickness of at least 0.8 mm and at least two objects are separated from one another by a transparent flexible film.
10. A reusable packaging system for packaging clothing, sports articles, toys or home worker articles, wherein containers comprising a transparent polymer and having a wall thickness of at least 0.8 mm are used for packaging the clothing, sports articles, toys or home worker articles and smaller containers which fit accurately into the containers or can be hung into the containers are made available for reuse of the containers.
